MultiCyt™ QBeads™ PlexScreen

Reconstituting the LT- α standard in 2 mL of assay diluent results in a concentration of 5000 pg/mL. Standard curves for no-wash and wash protocols were performed in triplicate (+/- S.D.). The limit of detection, represented by the dashed line, is determined by adding 3 standard deviations to the mean of samples without LT- α (N=12). Results are typical and may vary based on specific assay conditions.
